

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

PREFACE.

The extended calculations required by some of the applications of trigonometry are laborious even to experienced computers, and to beginners are often a fruitful source of discouragement. Experience in making calculations and familiarity with the formulas employed suggest methods of arrangement by which skilful computers shorten their work and save much of their time. The aim should always be to secure the results to the required degree of accuracy with a minimum expenditure of time and labor. So far as the mechanical part of the work is concerned, the principal factors leading to this end are the proper arrangement of the formulas employed, the use of conveniently arranged tables having the needed helps for facilitating interpolation, and the use of no more places of decimals than are necessary to secure the desired accuracy in the results.

Orderly arrangement is almost indispensable to correct and rapid computation; on this account the practice of making computations on scraps of paper without systematic arrangement should not be followed. In the beginning, an outline of the entire solution should be made by writing the symbols of the quantities to be used in a vertical column, those to be combined being placed adjacent. In the same solution, turning more than once to the same place in the tables should be avoided, by taking at one opening all the functions of a given angle that may be required, and writing them in their proper places. The tables employed should be conveniently arranged, and, in general, should have auxiliary tables of proportional parts on the margins of the pages, so that the interpolations can easily be made mentally.

The number of decimal places to be used in any calculation is governed by the character of the data given, and the degree of accuracy required in the results. When the data have great precision, and the results are required with all attainable accuracy, seven decimal places must be used, or even a larger number. But for nearly all calculations such precision is not required, and the use of logarithms to five places of decimals is sufficient, as they afford results which are generally correct to one ten-thousandth

part. In calculations where this degree of accuracy is not necessary, a still smaller number of decimal places may be used. In such cases natural numbers and the natural trigonometric functions are frequently more convenient than their logarithms.

In compiling this book for general use, the needs of computers and of students have been kept in view. The arrangements of the tables are those which have been found the most convenient by experienced computers; they are at the same time such as are best adapted to the use of students. All needed helps are given for facilitating interpolation. Auxiliary tables of proportional parts accompany the logarithmic portions of the book, but are omitted in the table of natural trigonometric functions, where differences are generally small.

Throughout the greater part of the book every tenth line is enclosed by parallel rules, and the other lines are grouped in threes. This gives the pages an open appearance, enabling one to find more readily the numbers sought, and securing in the trigonometric tables a symmetrical arrangement such that the order is the same in reading from the bottom of the page as from the top.

The auxiliaries S and T, which are always used in connection with the logarithms of numbers, are conveniently placed at the bottom of pages 2 to 21, instead of in a separate table. Their arithmetical complements, CS and CT, are to be found on pages 62 to 64, adjacent to the logarithmic trigonometric functions with which they are used.

The tables of addition and subtraction logarithms are based on those of Zech. The argument in each of these tables is obtained by subtracting the smaller logarithm from the larger. The function is always added to the larger logarithm in addition, and always subtracted from it in subtraction. On account of these uniform ways of proceeding, these tables are more convenient than the Gaussian tables.

NOTE TO THE FIFTH EDITION.

The changes in this edition are as follows: Some of the astronomical constants at the end of the book have been altered to bring them into agreement with the results of recent investigations. The values of log tan 10° 24′, log sin 26° 49′, and log tan 30° 13′ have been corrected. No other errors in the third and fourth editions have come to my notice.

W. J. HUSSEY.

INTRODUCTION.

Logarithms are used in lengthy numerical calculations to diminish the labor of multiplication, division, involution and evolution, by respectively substituting for them the operations of addition, subtraction, multiplication and division.

The rules for their use are as follows:

The logarithm of a product is equal to the sum of the logarithms of its factors.

The logarithm of a quotient is equal to the logarithm of the dividend, minus the logarithm of the divisor.

The logarithm of any power of a number is equal to the logarithm of the number multiplied by the index of the power.

The logarithm of any root of a number is equal to the logarithm of the number divided by the index of the root.

Or, expressed in formulas,

$$\log A \times B = \log A + \log B, \qquad \log \frac{A}{B} = \log A - \log B,$$
$$\log A^n = n \log A, \qquad \log \sqrt[n]{A} = \frac{\log A}{n}.$$

These rules are true for all systems of logarithms. The Common Logarithms are the only ones used in numerical calculations and in the following pages they are always meant unless the contrary is stated.

The common logarithm of a given number is the index of that power of 10 which is equal to the number. Thus, 2 is the logarithm of 100, because $10^2 = 100$; this equation is usually written $\log 100 = 2$. 10 is the base of the system. A system of logarithms comprises the logarithms of all positive numbers to a given base.

From the definition of common logarithms it follows, that

$$\begin{array}{lll} \log 1 &=& 0, & \log 0.1 &=& -1, \\ \log 10 &=& +1, & \log 0.01 &=& -2, \\ \log 100 &=& +2, & \log 0.001 &=& -3, \\ \log 1000 &=& +3, & \log 0.0001 &=& -4, \\ & & \text{etc.,} & & \text{etc.,} \end{array}$$

from which it is evident, that logarithms are, in general, not integers. Thus, the logarithm of a number between

The fractional part of a logarithm is usually expressed decimally and is so taken as to be positive. It is then called the *mantissa*, and the integral part is called the *characteristic*.

Changing the decimal point in a number is equivalent to multiplying or dividing it by an integral power of 10; consequently, the logarithms of numbers which are the same, excepting the position of the decimal point, differ by integers. Thus the logarithm of 389.4 is 2.59040, and since 38940 = 100×389.4 , the first rule for the use of logarithms gives

$$\begin{array}{rcl} \log 36940 &= \log 100 + \log 389.4 \\ &= 2 &+ 2.59040 = 4.59040. \end{array}$$

Similarly,

$$\begin{array}{r} \log 3.8940 = \log .01 + \log 389.4 \\ = -2 + 2.59040 = 0.59040. \end{array}$$

Hence.

The mantissae of the logarithms of all numbers composed of the same figures in the same order, are the same.

The value of the characteristic depends upon the position of the decimal point in the number. An inspection of the above table shows, that

The characteristic of the logarithm of a number, partly or wholly integral, is zero or positive, and one less than the number of figures in the integral portion;

The characteristic of the logarithm of a pure decimal is negative, and one more than the number of ciphers preceding the first significant figure.

Examples: The mantissae of the logarithms of 349600, 3496, 3.496, .003496 are the same, being .54357; their characteristics are +5, +3, 0 and -3, respectively. Thus, $\log .003496 = \overline{3}.54357$, the minus sign being placed over the characteristic to indicate that it only is negative.

The rule given above for determining the characteristic of the logarithm of a pure decimal is strictly correct, and so also is the manner of writing the negative characteristic. In computing, however, it is not desirable to use the characteristics in the manner indicated. It is preferable to add 10 to logarithms having negative characteristics and to allow for the increase by a proper interpretation of the results. When so increased the characteristics may, in all operations, except in some cases in the extraction of roots, be treated as if they were positive. When written in this manner, the rule for their determination is as follows:

The characteristic of the logarithm of a pure decimal is 9, diminished by the number of ciphers preceding the first significant figure.

Examples: The characteristics of the logarithms of .8437, .02804, .000105 and .000009207 are respectively 9, 8, 6 and 4.

The logarithmic trigonometric functions, and the logarithms of constants less than unity contained in these tables, have had their characteristics increased by 10.

In finding the logarithm of a root an apparent difficulty arises when the characteristic is negative and is not a multiple of the index of the root. The difficulty disappears by increasing the characteristic negatively by the smallest number which will make it such a multiple and by increasing the mantissa positively by the same number. Thus, the logarithm of .003392 is $\overline{3}.53046$. The logarithm of its square root is obtained by writing its logarithm in the form -4+1.53046 and dividing by 2, the index of the root. This gives -2+.76523, or $\overline{2}.76523$, or 8.76523.

A better way of proceeding is to add 10 times the index of the root to the logarithm and then divide by the index of the root. Thus, in the example given, adding 20 to the logarithm of .003392 and dividing by 2, gives 8.76523, which is the logarithm of the square root. By adding 30 and dividing by 3, the logarithm of the cube root is obtained. The logarithm of the cube root of .003392 is 9.17682.

The arithmetical complement of a logarithm is the difference obtained by subtracting it from 0, or from 10, if it is desired to avoid negative characteristics.

It is easily obtained by subtracting each figure of the logarithm, except the last significant one, from 9; the last significant figure must be subtracted from 10. Thus, $\log 2763 = 3.44138$, and its arithmetical complement is 6.55862. It is to be noticed, that the logarithm of the reciprocal of a number, is the arithmetical complement of the logarithm of the number; for example, $\log_{11} = 6.55862$.

Since the sine and cosecant, cosine and secant, tangent and cotangent are reciprocals, their logarithms are arithmetical complements. Thus, log sin 22° 18′ 24''=9.57928, and log cosec 22° 18′ 24''=0.42072; log cos 22° 18′ 24''=9.96622, and log sec 22° 18′ 24''=9.03378; log tan 22° 18′ 24''=9.61306, and log cot 22° 18′ 24''=0.38694.

A dash printed over a terminal 5 indicates that the true value is less than 5. For example the logarithm of 59903 to seven decimal places is 4.7774486; to five decimal places this is written $4.7774\overline{5}$. If only four decimal places are required in a computation, the $\overline{5}$ is neglected. Thus, the above logarithm is written 4.7774.

When a dash is not printed over a terminal 5, and only four decimal places are required, the fourth decimal figure is increased by one and the 5 neglected. For example, the logarithm of 7671 to five decimal places is 3.88485; to four decimal places this is written 3.8849.

TABLE I.

Pages 2-3 contain the mantissae of the logarithms of all numbers of one, two and three figures; the characteristics are determined by the rules previously given. If the number has one or two figures, it is given in the first column, headed N, and the mantissa of its logarithm is directly opposite it in the second column, headed L. Thus, $\log 3 = 0.47712$, $\log 24 = 1.38021$, $\log .067 = 8.82607$. If the number has three figures, the first two are given in the first column and the third in the horizontal row at the top or bottom of the page, and the mantissa of its logarithm is at the intersection of the line containing the first two figures and the column containing the third. Thus, $\log 184 = 2.26482$, $\log 89.1 = 1.94988$, $\log 9.37 = 0.97174$.

Pages 4-21 contain the mantissae of the logarithms of numbers from 100 to 10009. The arrangement is similar to that just described. The first three figures of the number are given in the first column and the fourth in the horizontal row at the top or bottom of the page. The last three figures of the mantissae are given in the columns headed 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, and the first two, at intervals, in the second column under L. When the first two are not given in any line, they are to be taken from the first line above containing them, except, when the last three are preceded by a *, in which case they are to be taken from the next line. Thus, (p. 13) $\log 5764 = 3.76072$, $\log 58.35 = 1.76604$, $\log .5889 = 9.77004$.

When the number has more than four figures, its logarithm is found by interpolation. For small differences, it is assumed, that differences between numbers are proportional to the differences between their logarithms. For example, required the logarithm of 168.342. The number has three orders of integers, hence the characteristic is 2. Disregarding the decimal point, the number is 168342. The round numbers, having four significant figures, next smaller and next greater than this, are 168300 and 168400, and their mantissae are (p. 5) .22608 and .22634. These numbers differ by 100, their mantissae, by 26. 26, being the difference between two successive values in the table, is the tabular difference. 168342 is 42 greater than 168300, hence its mantissa is $\frac{160}{1000}$ of 26 (= 11, to the nearest integer,) greater than that of 168300. Therefore, log 168.342 = 2.22619. Similarly, log 39.6427 = 1.59816.

To facilitate interpolation, the tenths of the tabular differences are given under P P, (proportional parts). Thus, from the proportional table for 26, (p. 5).

the proportional part for
$$4 = 10.4$$

 $\frac{1}{10}$ " " $2 = .52$
Therefore, " " $42 = 10.92$,

or 11, to the nearest integer, which agrees with the value above.

By reversing these operations, the number corresponding to a given logarithm may be found. For example, find the number of which 1.47384 is the logarithm. The next smaller mantissa (p. 7) is .47378. It corresponds to the number 2977. The difference between it and the next greater mantissa, .47392, is 14, while the difference between it and the given mantissa is 6. The figures following 2977 are obtained by dividing 6 by 14, giving 43. Hence, the number is 29.7743. The interpolation is facilitated by using the proportional table for 14. In it, 5.6 is the value next smaller than the given difference 6; 4, the fifth figure of the number, corresponds to 5.6. The difference between 6 and 5.6 is .4, which becomes 4.0 by removing the decimal point one place to the right. Corresponding to 4.0, the nearest value is 3, this is the sixth figure of the number. The interpolations, where proportional parts are given, should be made mentally, the results only being written.

The logarithmic sines and tangents of small angles may be found by means of the values of S and T, given at the bottoms of the pages. The formulas for their use are as follows:

$$\log \sin = \log \arctan + S$$
, $\log \tan = \log \arctan + T$,

the angle being expressed in seconds of arc. The value of S or T, to be used in any case, is that which corresponds to the angle.

Example 1. Find log sin 3".4785.

TABLE II.

When the logarithms of two numbers are given and the logarithm of their sum or difference is required, it may be found by using the addition or subtraction table. The equations at the bottoms of the pages, 24-36 inclusive, indicate the manner of using these tables. In interpolating, it is to be noticed that the function B decreases as the argument A increases; consequently, the proportional parts must be subtracted instead of added.

Example 1. Given, $\log a = 0.98519$ and $\log b = 0.64834$. Required $\log (a + b)$.

$$\log a = 0.98519$$

$$\log b = 0.64834$$

$$A = \log a - \log b = 0.33685.$$

$$B = 0.16448 \quad p. 24.$$

$$\log (a+b) = \log a + B = 1.14967.$$

In this case the tabular difference is 31, the proportional table for 31 gives 26 as the proportional part corresponding to 85, the last two figures of A; subtracting

26 from 0.16474, the value of B in the table corresponding to a value of A = 0.33600, gives 0.16448. This is the value of B corresponding to A = 0.33685.

Example 2. Given, $\log a$ and $\log b$, as in Example 1. Required $\log (a-b)$.

In this case $x = \log a - \log b$ is >.3, and, as above,

$$A = \log a - \log b = 0.33685$$

 $B = 0.26794$ p. 29.
 $\log (a - b) = \log a - B = 0.71725$.

Example 3. Given, $\log a = 0.74346$ and $\log b = 0.59484$. Required $\log (a-b)$.

In this case $x = \log a - \log b$ is <.3, and

$$B = \log a - \log b = 0.14862$$

 $A = 0.53790$ p. 83.
 $\log (a - b) = \log a - A = 0.20556$.

TABLES III AND IV.

These tables, pp. 37-106, contain the logarithms of the trigonometric functions. The headings of the pages and columns indicate what they contain. The degrees are given at the tops, and bottoms, of the pages. On pp. 37-49, the minutes and each ten seconds are given in columns at the left and right, headed '', and the odd seconds are given in a horizontal row at the top and bottom of each page. On pp. 50-106, the minutes are given in columns at the left and right, headed '; and on pp. 50-60, each ten seconds is given in a horizontal row at the top and bottom of each page. The columns of minutes on the left read downward; the horizontal rows at the top, from left to right; these go with the degrees at the tops of the pages. The columns of minutes at the right and the horizontal rows at the bottom, read in the opposite directions, and go with the degrees at the bottoms of the pages. On pp. 62-106, the tabular differences of the logarithmic sines and cosines are given in the columns headed d (difference), and those of the logarithmic tangents and cotangents in the columns headed c d (common difference).

Example 1. Find log sin 0° 37′ 24′′.37.

Page 44.
$$\log \sin 0^{\circ} 37' 24'' = 8.03659$$
 Tabular difference = 19. proportional part for $3 = 5.7$

10 " " 7 = 1.33

 $\log \sin 0^{\circ} 37' 24''.37 = 8.03666$.

The tabular difference is 19 and the proportional table for 19 (p. 45), is used to facilitate the interpolation. The tabular difference is obtained by subtracting log $\sin 0^{\circ} 37' 24' = 8.03659$ from $\log \sin 0^{\circ} 37' 25'' = 8.03678$. In performing this subtraction, only the final figures of the logarithms need be used. Thus, in this case, subtract 59 from 78. The interpolation should be made mentally and only the final result written.

Example 2. Find log tan 0° 42′ 17″.48.

Page 47.
$$\log \tan 0^{\circ} 42' 17'' = 8.08992 \quad \text{Tabular difference} = 17.$$
 proportional part for .48 = 8.16
$$\log \tan 0^{\circ} 42' 17'' 48 = 8.09000.$$

Example 3. Find log cos 0° 57′ 19″.

This is given without interpolation in the first column of page 48, the first figures being given at the top of the column. The value is 9.99994.

Example 4. Find log cos 89° 43′ 28″.4.

The proportional part is subtracted, because the cosine, here, decreases as the angle increases.

Example 5. Find log sin 3° 27' 44''.6.

Also from pages 54 and 55,

Example 6. Find log tan 8° 33' 17".4.

Example 7. Find log cot 56° 43′ 24″.7.

When the logarithm of a trigonometric function is given, the angle may be found by reversing the above operations.

Example 8. Given, $\log \tan x = 9.87258$. Find x.

In the column of logarithmic tangents on page 98, we find log tan 36° 42′ = 9.87238, with the tabular difference 26. The difference between this logarithm and the given one is 20. The proportional table for 26 gives

proportional part for
$$40 = 17.3$$

" " 6 = 2.6

" " 2 = .09

consequently " " 46.2 = 19.99, or very nearly 20.

Hence the number of seconds is 46.2, and the required angle is 36° 42′ 46′′.2.

When a very small angle is to be found by means of its logarithmic sine or tangent, and accuracy is desired, the arithmetical complement of S or T, pp. 2-21, should be used. These are given in the columns headed C S and C T, pp. 62-64. The formulas for their use are as follows:

$$\log \operatorname{arc} = \log \sin + C S$$
,
 $\log \operatorname{arc} = \log \tan + C T$,

the angle being expressed in seconds of arc. The value of CS or CT to be used in any case, is that which corresponds to the angle.

Example 9. Given, $\log \sin x = 6.82973$. Find x.

The value of x, (see p. 62), lies between 0° 2' and 0° 3', or between 120' and 180', and, corresponding to this,

$$C S = 5.31443$$

 $log sin x = 6.82973$
 $log arc = 2.14416$.

The number corresponding to the logarithm 2.14416 is, (p. 4), 139.368. Therefore, $x = 139''.368 = 0^{\circ}$ 2' 19''.368.

It is sometimes required to find the logarithm of one trigonometric function from that of another, without requiring the angle. To facilitate this, special proportional tables, headed with the tabular differences of both functions, are given, (pp. 71-106), wherever the space admits it.

Example 10. Given, $\log \tan x = 9.67644$. Required $\log \cos x$.

The difference between the given logarithm and that given in the table, 9.67622, (see p. 87, opposite 25° 23'), is 22. The tabular differences of the two logarithmic functions at this place are 32 and 6. In the proportional table for \P , 22 corresponds to 4; this, subtracted from the tabular logarithmic cosine 9.95591, gives the required log cos $\alpha = 9.95587$.

In the examples already given, the angles have all been less than 90°. The logarithms of trigonometric functions of angles greater than 90° may be obtained by remembering the relations given in the following table:

Angle	Sine	Cosine	Tangent	Cotangent
æ	$+\sin x$	$+\cos x$	$+\tan x$	+ cot æ
90°+x	$+\cos x$	$-\sin x$	$-\cot x$	$\tan x$
180° + ∞	$-\sin x$	$-\cos x$	+ tan æ	$+\cot x$
270° + x	$-\cos x$	$+\sin x$	$-\cot x$	$\tan x$

For angles greater than 90°, the degrees are given at the tops and bottoms of the pages in smaller type. Where these have been obtained from the acute angle on the same page, by adding 90° or 270°, they are preceded by a *. This indicates that the co-function is to be taken. Otherwise, the direct function is to be taken. The algebraic signs of the functions, as indicated by the above table, must be attended to.

Example 11. Find log sin 112° 15′ 17″.

Page 84. $\log \sin 112^{\circ} 15' 00'' = 9.96640 \quad \text{Tabular difference} = 6.$ proportional part for 17'' = 2, nearly, $\log \sin 112^{\circ} 15' 17'' = 9.96638.$

From the same page, log tan 202° 28′ 34″ = 9.61671, log cos 202° 28′ 34″ = 9.96569, log cot 292° 18′ 37″ = 9.61314,...

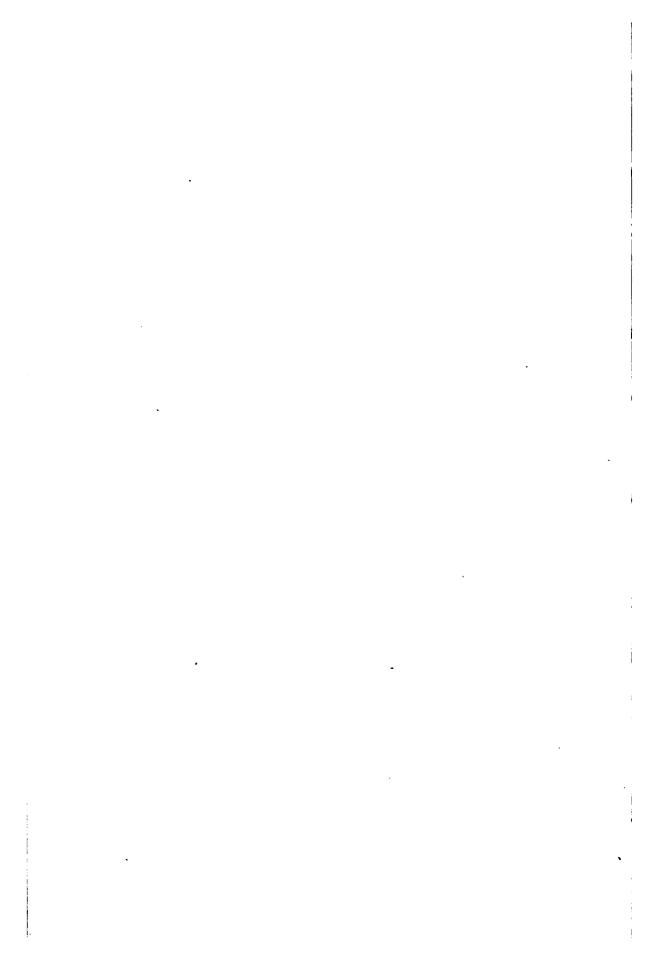

In the last two examples the "following the logarithm indicates that the trigonometric function is negative. This is the usual way of indicating that the number corresponding to a logarithm is negative.

TABLE V.

Pages 108-130 contain the natural trigonometric functions for each minute. The arrangement is the same as that of the logarithms of the trigonometric functions, pp. 62-106, except that differences and proportional parts are not given.

TABLE VI, ETC.

Pages 131-139 contain the squares, cubes, square roots and cube roots of numbers from 1 to 1020. The arrangement of this table, and also of the ones which follow it, will be understood by inspecting them.

I TABLE OF THE COMMON LOGARITHMS OF NUMBERS . WITH THE AUXILIARIES S AND T.

THE NATURAL LOGARITHMS

OF

WHOLE NUMBERS FROM 1 TO 200.

Common logarithms may be converted into natural logarithms by multiplying them by 2.3025850930.

Natural logarithms may be converted into common logarithms by multiplying them by 0.4342944819.

A	B 0	1	2	3	4	5	6	7	8	9	P P

a > b, $A = \log a - \log b$, $\log (a + b) = \log a + B$.

The above table of Addition Logarithms is based on the identity

$$\log(a+b) = \log a \left(1 + \frac{b}{a}\right)$$
$$= \log a + \log \left(1 + \frac{1}{\frac{a}{b}}\right).$$

The argument A is $\log \frac{a}{b}$, and the function B is $\log \left(1 + \frac{1}{a}\right)$. conse-

quently

$$\log(a+b) = \log a + B.$$

$$a>b$$
, $A=\log a-\log b$, $\log (a-b)=\log a-B$.
or $B=\log a-\log b$, $\log (a-b)=\log a-A$.

The above table of Subtraction Logarithms is based on the identity

$$\log(a-b) = \log\left(\frac{a}{x}\right) = \log a - \log\left(\frac{x}{x-1}\right),$$

where $x = \frac{a}{b}$.

The argument is $\log x$, and the function is $\log \left(\frac{x}{x-1}\right)$.

A is the argument and B the function when $\log x > .3$, and B is the argument and A the function when $\log x < .3$.

III

TABLE OF THE LOGARITHMS

OF THE

TRIGONOMETRIC FUNCTIONS

FROM 0° TO 1° AND 89° TO 90° FOR EVERY SECOND,

AND

FROM 1° TO 6° AND 84° TO 89° FOR EVERY TEN SECONDS.

TABLE OF SQUARES, CUBES, SQUARE ROOTS AND CUBE ROOTS

OF

WHOLE NUMBERS FROM 1 TO 1020.

The numbers are given in the columns headed N, their squares, cubes, square roots and cube roots respectively in the columns headed N², N². \sqrt{N} and $\sqrt[4]{N}$

0-60

FORMULAS.

GENERAL TRIGONOMETRIC FORMULAS.

```
(1)
                                      \sin^2 a + \cos^2 a = 1.
                                      \sin(a \pm \beta) = \sin a \cos \beta \pm \cos a \sin \beta.
(2)
(3)
                                      \cos(a \pm \beta) = \cos a \cos \beta \mp \sin a \sin \beta.
                                      \tan(a \pm \beta) = \frac{\tan a \pm \tan \beta}{1 \mp \tan a \tan \beta}
(4)
                                      sin 2 a
                                                        =2 \sin a \cos a.
(5)
                                                        =\cos^2 a - \sin^2 a = 1 - 2\sin^2 a = 2\cos^2 a - 1.
                                      cos 2 a
(6)
                                                         =\frac{2\tan a}{1-\tan^2 a}
(7)
                                      tan 2 a
                                      sin a
                                                        = \frac{1}{4} (1 - \cos 2a).
(8)
                                      cos a
                                                         =\frac{1}{2}(1+\cos 2a).
(9)
                                                                sin 2a
(10)

```

FORMULAS FOR PLANE TRIANGLES.

In these formulas a, b and c denote the sides and A, B and C the opposite angles. K denotes the area and $s = \frac{1}{2}(a+b+c)$. Only one formula of each set is given, the other two may be obtained by advancing the letters.

(21)
$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}.$$
(22)
$$\frac{a+b}{a-b} = \frac{\tan \frac{1}{2}(A+B)}{\tan \frac{1}{2}(A-B)}.$$
(23)
$$a^{2} = b^{2} + c^{3} - 2bc\cos A.$$
(24)
$$a = b\cos C + c\cos B.$$
(25)
$$\sin \frac{1}{2}A = \sqrt{\frac{(s-b)(s-c)}{bc}},$$

oxli

```

```

FORMULAS.

(26)
$$\cos \frac{1}{2} A = \sqrt{\frac{s(s-a)}{b c}}.$$

(27)
$$\tan \frac{1}{s} A = \sqrt{\frac{(s-b)(s-c)}{s(s-a)}}.$$

(28)
$$K = \frac{1}{2} a b \sin C = \sqrt{s(s-a)(s-b)(s-c)}.$$

FORMULAS FOR RIGHT SPHERICAL TRIANGLES.

Denoting the right angle by C, the formulas are

```
(29)
                           \sin a = \sin A \sin c.
```

$$\sin b = \sin B \sin c.$$

(31)
$$\tan a = \cos B \tan c = \tan A \sin b.$$

(32)
$$\tan b = \cos A \tan c = \tan B \sin a.$$

$$\cos A = \cos a \sin B.$$

$$\cos B = \cos b \sin A.$$

$$\cos c = \cos a \cos b.$$

$\cos c = \cot A \cot B$. (36)

FORMULAS FOR THE GENERAL SPHERICAL TRIANGLE.

$$\cos a = \cos b \cos c + \sin b \sin c \cos A.$$

(87)
$$\sin a \sin B = \sin b \sin A.$$

(38)
$$\sin a \cos B = \cos b \sin c - \sin b \cos c \cos A.$$

(39)
$$\sin a \cos C = \cos c \sin b - \sin c \cos b \cos A.$$

(40)
$$\sin A \cot B = \cot b \sin c - \cos c \cos A.$$

(41)
$$\sin A \cot C = \cot c \sin b - \cos b \cos A.$$

(42)
$$\sin A \cos b = \cos B \sin C + \sin B \cos C \cos a.$$

(43)
$$\sin A \cos c = \cos C \sin B + \sin C \cos B \cos a$$

$$\sin a \cot b = \cot B \sin C + \cos C \cos a.$$

(45)
$$\sin a \cot c = \cot C \sin B + \cos B \cos a.$$

$$(46) \cos A = \sin B \sin C \cos a - \cos B \cos C.$$

Putting
$$s = \frac{1}{2}(a+b+c)$$
 and $S = \frac{1}{2}(A+B+C)$

(47)
$$\sin \frac{1}{2} A = \pm \sqrt{\frac{\sin(s-b)\sin(s-c)}{\sin b\sin c}}.$$

(48)
$$\cos \frac{1}{2}A = \pm \sqrt{\frac{\sin s \sin (s-a)}{\sin b \sin c}}.$$

(49)
$$\tan \frac{1}{2}A = \pm \sqrt{\frac{\sin (s-b)\sin (s-c)}{\sin s \sin (s-a)}}.$$

(50)
$$\sin \frac{1}{2} a = \pm \sqrt{\frac{-\cos 8 \cos (8 - A)}{\sin B \sin C}}$$

(50)
$$\sin \frac{1}{2} a = \pm \sqrt{\frac{-\cos S \cos (S - A)}{\sin B \sin C}}.$$
(51)
$$\cos \frac{1}{2} a = \pm \sqrt{\frac{\cos (S - B) \cos (S - C)}{\sin B \sin C}}.$$
(52)
$$\tan \frac{1}{2} a = \pm \sqrt{\frac{-\cos S \cos (S - A)}{\cos (S - B) \cos (S - C)}}.$$

(52)
$$\tan \frac{1}{2} a = \pm \sqrt{\frac{-\cos S \cos (S - A)}{\cos (S - B) \cos (S - C)}}.$$

(53)
$$\sin \frac{1}{2} A \sin \frac{1}{2} (b+c) = \pm \sin \frac{1}{2} a \cos \frac{1}{2} (B-C).$$

(54)
$$\sin \frac{1}{2} A \cos \frac{1}{2} (b+c) = \pm \cos \frac{1}{2} a \cos \frac{1}{2} (B+C).$$

(55)
$$\cos \frac{1}{2} A \sin \frac{1}{2} (b-c) = \pm \sin \frac{1}{2} a \sin \frac{1}{2} (B-C).$$

(56)
$$\cos \frac{1}{2} A \cos \frac{1}{2} (b-c) = \pm \cos \frac{1}{2} a \sin \frac{1}{2} (B+C).$$

(57)
$$\tan^2 \frac{1}{4} K = \tan \frac{1}{4} s \tan \frac{1}{4} (s-a) \tan \frac{1}{4} (s-b) \tan \frac{1}{4} (s-c).$$

FORMULAS RESULTING FROM THE METHOD OF LEAST SQUARES.

Formulas for Combining Observations and Determining Probable Errors.

1. Direct observations of a quantity: n separate results, $m_1, m_2, \ldots m_n$ of equal weight.

Most probable value of quantity, $z = \frac{[m]}{n}$.*

Residuals, $z - m_1 = v_1$, $z - m_2 = v_2$, ... $z - m_n = v_n$.

Probable error of z,

$$r_0 = \pm 0.6745 \sqrt{\frac{[vv]}{n(n-1)}}.$$

Probable error of a single observation, $r = \pm 0.6745 \sqrt{\frac{[vv]}{n-1}}$

2. Direct observations of a quantity: n separate results, $m_1, m_2, \ldots m_m$ of unequal weights, $p_1, p_2, \ldots p_n$.

Most probable value of quantity,

$$z = \frac{[pm]}{[p]}.$$

Probable error of z,

$$r_0 = \pm 0.6745 \sqrt{\frac{[pvv]}{[p](n-1)}}.$$

Probable error of an obs'n of weight unity, $r = \pm 0.6745 \sqrt{\frac{[pvv]}{n-1}}$.

Weight of z,

$$P = [p]$$

Relation of weights to probable errors,

$$p_1:p_2:\ldots:\frac{1}{r_1^2}:\frac{1}{r_2^2}:\ldots$$

3. If $Z = az_1 \pm bz_2 \pm \dots kz_n$, and the probable errors and weights of $z_1, z_2, \dots z_n$ are $r_1, r_2, \dots r_n$ and $p_1, p_2, \dots p_n$, then the probable error and weight of Z are given by

$$r = \pm \sqrt{(a r_1)^2 + (b r_2)^2 + \dots (k r_n)^2}.$$

$$\frac{1}{p} = \frac{a^2}{p_1} + \frac{b^2}{p_2} + \dots \frac{k^2}{p_n}.$$

4. In general, if $Z = f(z_1, z_2, \dots z_n)$, the probable error of Z is

$$r = \pm \sqrt{\left(\frac{df}{dz_1}\right)^2 r_1^3 + \left(\frac{df}{dz_2}\right)^2 r_2^2 + \ldots + \left(\frac{df}{dz_n}\right)^2 r_n^3}.$$

5. Direct observations of a function of a quantity z: the separate results, $m_1, m_2, \ldots m_n$ of equal weight, and the form of the function, az. The observation equations are

$$a_1 z + m_1 = 0,$$

 $a_2 z + m_2 = 0,$

$$a_n z + m_n = 0.$$

The most probable value of z and its probable error are

$$z = -\frac{[am]}{[aa]} \qquad r = \pm 0.6745 \sqrt{\frac{[vv]}{[aa](n-1)}}$$

If the observations are of unequal weights, multiply the observation equations through by the square roots of their respective weights, and proceed as before.

6. Direct observations of a function of two quantities, w and z: the separate

^{*}The symbols [] signify the sum of all similar quantities. Thus, $[m] \equiv m_1 + m_2 + \dots + m_n.$ $[pvv] \equiv p_1 v_1^2 + p_2 v_2^2 + \dots + p_n v_n^2.$

results, $m_1, m_2, \ldots m_n$ of equal weights, and the form of the function, aw + bz. The observation equations are

$$a_1 w + b_1 z + m_1 = 0,$$

 $a_2 w + b_3 z + m_2 = 0,$
 $a_3 w + b_3 z + m_4 = 0.$

The normal equations are

$$[aa]w+[ab]z+[am]=0$$
,
 $[ab]w+[bb]z+[bm]=0$.

Let

$$[bb] - \frac{[ab]}{[aa]}[ab] = [bb.1], [bm] - \frac{[ab]}{[aa]}[am] = [bm.1]$$

Then the most probable values of w and z are given by

$$z = -\frac{[bm.1]}{[bb.1]},$$

$$w = -\frac{[ab]}{[aa]}z - \frac{[am]}{[aa]}.$$

The weights of w and z are

$$p_{\mathbf{w}} = [bb.1],$$
 $p_{\mathbf{w}} = \frac{[bb.1]}{[bb]}[aa].$

The probable error of a single observation (of weight unity) is

$$r=\pm 0.6745 \sqrt{\frac{[vv]}{n-2}};$$

and the probable errors of w and z are

$$r_w = \frac{r}{\sqrt{p_w}}, \qquad r_v = \frac{r}{\sqrt{p}}.$$

If the observations are of unequal weights, multiply the observation equations through by the square roots of their respective weights and proceed as before.

7. Direct observations of a function of three quantities, x, y and z: the separate results. $m_1, m_2, \ldots m_n$ of equal weight, and the form of the function, ax + by + cz. The observation equations are

$$a_1 x + b_1 y + c_1 z + m_1 = 0$$
,
 $a_2 x + b_2 y + c_3 z + m_2 = 0$,
 $a_3 x + b_4 y + c_5 z + m_4 = 0$

The normal equations are

$$[aa]x+[ab]y+[ac]s+[am]=0,[ab]x+[bb]y+[bc]s+[bm]=0,[ac]x+[bc]y+[cc]s+[cm]=0.$$

Let

$$[bb] - \begin{bmatrix} ab \\ aa \end{bmatrix} [ab] = [bb.1], \quad [bc] - \begin{bmatrix} ab \\ aa \end{bmatrix} [ac] = [ba.1],$$

$$[bm] - \begin{bmatrix} ab \\ aa \end{bmatrix} [am] = [bm.1],$$

$$[cc] - \begin{bmatrix} ac \\ aa \end{bmatrix} [ac] = [ca.1], \quad [cm] - \begin{bmatrix} ac \\ aa \end{bmatrix} [am] = [cm.1],$$

$$[cc.1] - \begin{bmatrix} bc.1 \\ bb.1 \end{bmatrix} [bc.1] = [cc.2], \quad [cm.1] - \begin{bmatrix} bc.1 \\ bb.1 \end{bmatrix} [bm.1] = [cm.2].$$

Then the most probable values of x, y and z are given by

$$z = -\frac{[c m.2]}{[c c.2]},$$

$$y = -\frac{[b c.1]}{[b b.1]} z - \frac{[b m.1]}{[b b.1]},$$

$$x = -\frac{[a b]}{[a a]} y - \frac{[a c]}{[a a]} z - \frac{[a m]}{[a a]}.$$

The weights of x, y and z are given by

$$p_{\sigma} = [c c.2],$$

$$p_{\sigma} = \frac{[c c.2]}{[c c.1]} [b b.1].$$

$$p_{\sigma} = \frac{[c c.2]}{[c c.1]_{\sigma}} \cdot \frac{[b b.1]}{[b b]} [a a],$$

in which

$$[cc.1]_a = [cc] - \frac{[bc]}{[bb]}[bc].$$

The probable error of a single observation (of weight unity) is

$$r = \pm 0.6745 \sqrt{\frac{[vv]}{n-3}},$$

and the probable errors of x, y and z are

$$r_o = \frac{r}{\sqrt{p_o}}, \quad r_v = \frac{r}{\sqrt{p_v}}, \quad r_o = \frac{r}{\sqrt{p_o}}$$

If the observations are of unequal weights multiply the observation equations through by the square roots of their respective weights, and proceed as before.
